

LIFECELL GETS AMERICAN ACCREDITATION

DC CORRESPONDENT

Chennai, Jan. 12

LifeCell international, the pioneers in umbilical cord blood, cord tissue and menstrual stem cell bank has become the first stem cell bank in the country to possess American association of blood banks (AABB) accreditation for cord blood and cord tissue preservation.

The accreditation was granted following an assessment by AABB including stem cell processing, document control, inspection and testing, training of lab technicians, sample identification, traceability, and validation of cord tissue preservation to quality compliances.

"The accreditation assures parents who are banking their baby's umbilical cord blood and cord tissue with us that the sample was qualified and tested as per international approved standards and gives them ready access to stem cells from any part of the world," said Mr Mayur Abhaya, executive director of LifeCell International.
